

# Linux Overview

#### What is Linux?

LINUX is an operating system or a kernel distributed under an open-source license. Its functionality list is quite like UNIX.

#### Who created Linux?

Linux is an operating system or a kernel which germinated as an idea in the mind of young and bright **Linus Torvalds** when he was a computer science student. He used to work on the UNIX OS (proprietary software) and thought that it needed improvements.

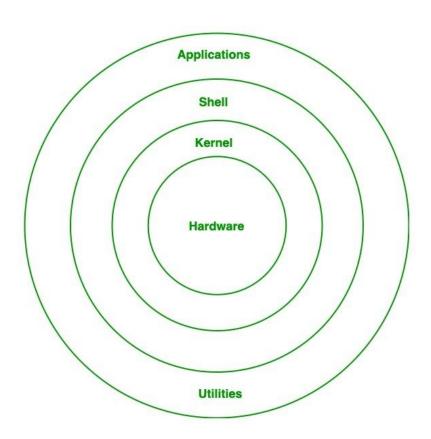

#### Is There Any Difference between Linux and Ubuntu?

Main difference between Linux and Ubuntu is Linux is the family of open-source operating systems which is based on Linux kernel.

Ubuntu is a free open-source operating system and the Linux distribution which is based on Debian.

Linux is the core system and Ubuntu is the distribution of Linux.

## Architecture of Linux

#### 1. Kernel:

Core of the Linux based operating system. It virtualizes the common hardware resources of the computer to provide each process with its virtual resources. This makes the process seem as if it is the sole process running on the machine. The kernel is also responsible for preventing and mitigating conflicts between different processes. Different types of the kernel are:

Monolithic Kernel

Hybrid kernels

Exo kernels

Micro kernels

- 2. System Library: Special types of functions that are used to implement the functionality of the operating system.
- 3. Shell: It is an interface to the kernel which hides the complexity of the kernel's functions from the users. It takes commands from the user and executes the kernel's functions.
- 4. Hardware Layer: This layer consists all peripheral devices like RAM/ HDD/ CPU etc.
- 5. System Utility: It provides the functionalities of an operating system to the user.

#### Advantages of Linux

- 1. Open Source OS
- Highly secure
- 3. The software updates in Linux are easy and frequent.
- 4. Large community support.
- 5. Performance of the Linux system is much higher than other OS.
- 6. Linux based server could run non-stop without a reboot for years on end.
- 7. Used by Amazon, Facebook, Google etc companies.

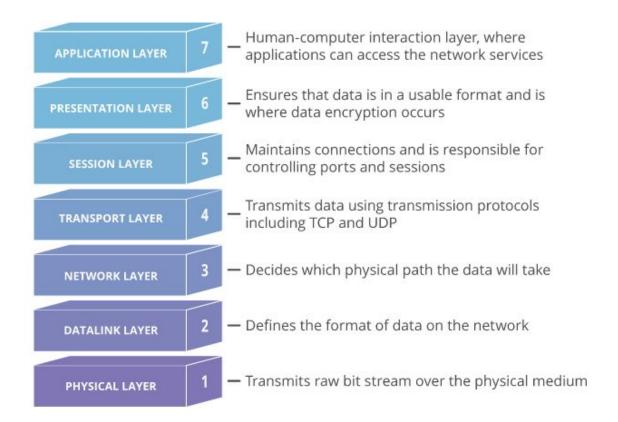

#### Disadvantages of Linux

- 1. Difficult for beginner.
- No standard edition
- 3. Difficult to troubleshoot.

## **Linux Commands**

Is	chmod	ssh	kill
top	sudo	ssh-keygen	mkdir
free	grep	scp	vi
touch file1.txt	pwd	nslookup	nano
cat file.txt	ifconfig	ufw	yum,dnf,apt
alias	telnet	firewalld	tar, zip, unzip
tail	nc -vz	df -h	sed, awk
chown	nmap	du -sh	useradd
man	diff	uptime	passwd
	find	timedatectl	userdel

#### OSI model

# Thank you.
